LandRight AI

The Legal-First Platform for Eminent Domain

The only eminent-domain platform built by eminent-domain lawyers.

Costly Delays

Right-of-way delays are crushing infrastructure projects nationwide, causing multimillion-dollar overruns and missed in-service dates that ripple through entire capital programs.

Documentation gaps and inconsistent landowner outreach dramatically increase litigation risk and regulatory audit exposure. When projects face scrutiny, incomplete records become existential threats.

New regulatory expectations—including the 2024 Uniform Relocation Act updates and FERC's enhanced landowner engagement requirements—add substantial workload without providing teams better tools to manage compliance. The old playbook simply doesn't work anymore.

A $50 Billion Annual Market Growing Fast

Massive Scale Today

The eminent domain market represents one of the largest untapped opportunities in legal technology. With 75,000+ cases filed annually and average legal spend of $200K-600K per project, we're looking at a $50 billion annual market expanding at 15% year-over-year.

This growth is driven by an unprecedented infrastructure boom that shows no signs of slowing. Every major capital project—from transmission lines to pipelines to fiber networks—requires right-of-way acquisition, and traditional methods simply cannot scale.

Annual Growth

YoY market expansion

Perfect Storm of Growth Drivers

Infrastructure Investment & Jobs Act

$1.2T in projects requiring right-of-way acquisition through 2030

Renewable Energy Boom

500 GW of new capacity by 2030 requiring extensive land rights

5G Network Buildout

800,000 new cell sites requiring easements and site control

Pipeline Expansion

$100B in new energy infrastructure demanding ROW programs

Legal-First AI + Attorney-in-the-Loop

LandRight AI combines cutting-edge artificial intelligence with attorney oversight to deliver the only eminent domain platform built for courtroom defensibility from day one.

1

Jurisdiction Engine (50 States)

Automatically drafts correct notices, petitions, and timelines based on jurisdiction-specific rules. Every document is built for courtroom defensibility, not just compliance checkboxes.

2

Good-Faith Engagement Binder

Creates owner-specific outreach plans with immutable engagement logs. One-click export produces audit-ready documentation that satisfies FERC and federal funding requirements.

3

Title & Encumbrance Analyzer

OCR technology extracts data from deeds, easements, and plats. Generates curative checklists and automated tasking to resolve title issues before they derail acquisitions.

4

Attorney Review Gates

Human-in-the-loop approvals required before filing any legal documents. UPL boundaries and appraisal standards are enforced throughout the workflow.

Why Now: Structural & Regulatory Tailwinds

The convergence of massive infrastructure investment, new regulatory mandates, and technology adoption creates an unprecedented window of opportunity. Companies can no longer afford manual processes when projects demand speed, compliance, and defensibility.

Grid Expansion

Massive grid modernization and capital programs require sustained right-of-way acquisition at unprecedented scale.

FERC Order 1977

Clarifies siting authority—proof of good-faith landowner engagement is now critical for federal approval.

URA Final Rule 2024

New Uniform Relocation Act requirements mandate enhanced notices, benefits documentation, and audit trail standards.

Fiber & 5G

Network densification creates repeatable, high-volume 'mini-ROW' workflows perfect for platform automation.

Product Snapshot

LandRight AI delivers enterprise-grade functionality through an intuitive interface that empowers every stakeholder—from field managers to general counsel.

Interactive GIS Map

ESRI integration displays parcel status, risk flags, and engagement tasks at a glance. Every stakeholder sees real-time project status.

Engagement Ledger

Complete history of landowner interactions with one-click 'Good-Faith Binder' export—audit-ready documentation in seconds.

Title Extraction

AI-powered OCR extracts critical data and generates curated curative playbooks with owners, instruments, and deadlines.

Role-Based Dashboards

Customized views for VP Development, General Counsel, and ROW Managers—everyone gets the data they need.

Who Buys & Why

VP Development / Project Management

Economic Buyer

Cares About: Project timelines, cost control, and risk mitigation across their portfolio

Pain Points: Delays cost millions in carrying costs and lost revenue. They need predictability to hit in-service dates and manage capital programs effectively.

Why They Buy: LandRight delivers schedule certainty and dramatically reduces budget overruns.

General Counsel / Legal Director

Technical Buyer

Cares About: Legal defensibility, jurisdiction coverage, and regulatory compliance across all projects

Pain Points: Outside counsel costs spiral out of control. Compliance burden grows with every new regulation. Audit exposure keeps them up at night.

Why They Buy: Courtroom-ready documentation and attorney-in-the-loop workflow reduce legal risk.

Land / ROW Manager

End User

Cares About: Ease of use, workflow throughput, and day-to-day operational efficiency

Pain Points: Drowning in spreadsheets, manual processes, and document chaos. They can't track engagement history or produce reports when executives ask.

Why They Buy: Intuitive interface and automated workflows let them manage 3x more parcels.

Initial Serviceable Market: High-Value Segments

Our 24-month go-to-market strategy targets four concentrated segments where land acquisition pain is acute, buying cycles are proven, and our value proposition delivers immediate ROI.

Investor-Owned Utilities

Transmission developers and grid modernization programs represent concentrated enterprise buyers with substantial capital programs. These organizations manage multi-year, multi-billion dollar portfolios requiring consistent ROW processes.

Public Power Leaders

Municipal utilities and joint-action agencies execute high project volumes with repeatable acquisition programs. Federal funding compliance requirements make our audit-ready documentation essential.

Interstate Gas Pipelines

FERC-jurisdictional programs with Resource Report and enhanced landowner engagement obligations. Order 1977 makes good-faith documentation critical for approval.

Fiber Builders & Tower Companies

High-volume site acquisition packages operating under statutory 'shot-clock' deadlines. Speed and consistency determine competitive advantage in this segment.

Go-to-Market: Low CAC to Rapid Scale

1

Phase 1: Existing Law Firm Clients

Launch 2-3 paid pilots with integrated attorney-review service agreements. Produce compelling case studies and reference customers.

2

Phase 2: Strategic Channels

Partnerships and continuing education with IRWA, EEI/APPA, and INGAA.

3

Phase 3: ABM + Product-Led Growth

Account-based marketing to top 200 enterprise logos. Free ROI calculators and CE webinars drive qualified inbound leads at minimal acquisition cost.

GTM Strategy

Phase 1

Direct Sales

Year 1

- Target: 20 customers
- $1M ARR milestone
- Prove product-market fit
- Build case studies and references

Phase 2

Hybrid Model

Year 2

- Add 3-person dedicated sales team
- Strategic partnerships with HDR, AECOM, and engineering firms
- Industry conference presence (IRWA, EEI)
- Target: 80 customers
- $4.5M ARR milestone

Phase 3

National Scale

Year 3

- Expand to 10-person sales organization
- Product-led growth tier launched
- Full 50-state coverage
- Target: 200 customers
- $12M ARR milestone

Competition & Defensible Moats

The Status Quo We're Disrupting

Existing ROW tracking systems focus on parcel management, payment processing, and GIS visualization—but provide no legal reasoning, no audit-grade engagement documentation, and no jurisdiction-specific compliance.

These legacy platforms were built for government agencies with 18-month sales cycles and risk-averse procurement processes. They serve yesterday's needs, not today's regulatory reality.

Our Defensible Competitive Moats

- **Jurisdiction Engine:** 50-state legal rule automation built by practicing attorneys
- **Engagement Binder:** Audit-ready good-faith documentation in one click
- **Title-to-Curative Automation:** OCR extraction with intelligent curative workflows
- **Attorney-in-Loop Guardrails:** Mandatory review gates prevent UPL exposure
- **Deep Integrations:** ESRI and land system partnerships create switching costs

Cost Advantage

Cheaper than traditional legal approaches

Deployment Speed

Days vs. 6-12 months for competitors

Private Sector Focus

Fast decisions, immediate value
